Letter of Transmittal

UNITED STATES DEPARTMENT OF LABOR,
Bureau of Labor Statistics,
Washington, D. C., October 10, 1952.

The Secretary of Labor:

I have the honor to transmit herewith a report on wages and related benefits in 40 of the Nation's major labor-market areas. These data were summarized from community wage surveys conducted by the Bureau between September 1951 and May 1952.

This report was prepared in the Bureau's Division of Wages and Industrial Relations by L. Earl Lewis and Otto R. B. Hollberg, under the direction of Toivo P. Kanninen. Louis E. Badenhop and Alexander N. Jarrell assisted in the planning of the surveys.

Ewan Clague, Commissioner.

Hon. Maurice J. Tobin,
Secretary of Labor.

INTRODUCTION	1
OCCUPATIONAL EARNINGS	2
RELATED BENEFITS	2
TABLES:	
Average earnings for selected office occupations -	
A-1 All industries	4
A-1a Manufacturing	7
A-1b Public utilities	10
A-1c Wholesale trade	13
A-1d Retail trade	16
A-1e Finance	19
A-1f Services	22
Average earnings for selected plant occupations -	
A-2 All industries	23
A-2a Manufacturing	26
A-2b Public utilities	29
A-2c Wholesale trade	31
A-2d Retail trade	34
A-2e Finance	37
A-2f Services	38
Related benefits -	
B-1 Paid holidays (all industries)	39
B-1a Paid holidays (manufacturing)	40
B-1b Paid holidays (public utilities)	41
B-1c Paid holidays (wholesale trade)	42
B-1d Paid holidays (retail trade)	43
B-1e Paid holidays (finance)	44
B-1f Paid holidays (services)	45
B-2 Paid vacations (office workers)	46
B-3 Paid vacations (plant workers)	50
B-4 Paid sick leave	54
B-5 Christmas or year-end bonuses	55
B-6 Profit-sharing plans	56
B-7 Health insurance plans	57
B-8 Hospitalization plans	58
B-9 Life insurance plans	59
B-10 Retirement pension plans	60

Wages and Related Benefits - 40 Labor Markets

Introduction

Occupational earnings and related wage benefits data presented herein have been summarized from community wage surveys conducted by the Bureau of Labor Statistics in 40 major labor markets between September 1951 and May 1952. 1/ Occupations common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis in each of these areas. Cross-industry methods of sampling were utilized in compiling earnings data for the following types of occupations: office clerical; professional and technical; maintenance and power plant; custodial, warehousing, and shipping. In presenting earnings information for such jobs, separate data were provided wherever possible for individual major industry divisions. Data were also collected and summarized on supplementary wage benefits such as vacation and sick leave allowances, paid holidays, nonproduction bonuses, and insurance and pension plans.

The Bureau's community wage study program is designed to meet a variety of governmental and nongovernmental uses of information on occupational earnings and related benefits. The areas covered in this report were selected for study in consultation with the Wage Stabilization Board. For the most part these areas rank among the Nation's largest metropolitan areas and range in size from New York City to Trenton, N. J. The combined population of the 40 areas exceeded 52 million, accounting for fully three-fifths of the aggregate population of the Nation's 168 metropolitan areas having a minimum population of 100,000 and a central city of at least 50,000 population. Twenty-eight States were represented, permitting an examination of inter-regional as well as intra-regional variations in pay levels in this report. More than 10 million workers were employed in the industries and establishment-size groups studied. 2/

The industrial composition of the areas studied varied substantially. Manufacturing industries employed more than half the workers in each of the New England and Middle Atlantic areas (except New York City) and in the areas studied in the Middle West. Nonmanufacturing industries employed a majority of the wage and salary workers in New York City and all southern areas except Birmingham and western areas except Los Angeles. Data are presented in this report separately for six industry divisions as well as on an all-industry basis.

1/ Bulletin reports issued for individual areas (see listing on last page) include greater detail than it was possible to present in this summary report. These reports also provide earnings data for occupations characteristic of particular, important local industries. See appendix for discussion of scope and method of survey.

2/ See appendix for scope and method of survey.

Unionization

With the exception of a few of the areas, mostly in the South, a majority of the plant workers were covered by collective-bargaining agreements; only in five areas were as many as a fifth of the office workers employed in establishments that operated under terms of union agreements covering such workers. 3/ On an all-industry basis union agreement coverage of plant workers ranged from a third in Atlanta, Jacksonville, and Oklahoma City to nine-tenths or more in Detroit, Pittsburgh, San Francisco-Oakland, and Seattle.

The proportion of plant workers covered by union agreements in manufacturing exceeded that in nonmanufacturing in most areas. Of 39 areas for which estimates of unionization are available, three-fourths or more of the plant workers in manufacturing and nonmanufacturing were covered in 25 and 7 areas, respectively. By way of contrast, less than 50 percent were covered by agreements in manufacturing in only 3 areas but in nonmanufacturing in 19 areas. Among office workers, union agreement coverage tended to be somewhat greater in nonmanufacturing, partly because of the substantial numbers of covered workers in public utilities.

Rate Structure

Formalized rate structures for time-rated plant workers were reported in establishments employing four-fifths or more of the total plant employment in 31 of the 40 areas, being virtually universal in the Pacific Coast areas and in Detroit. Providence, Scranton, and the southern areas, with the exception of Birmingham and Atlanta, were the only ones in which as many as a fifth of the plant workers were employed in establishments that determined time rates on an individual basis.

Plans providing single rates as well as a range of rates for individual occupations were reported in each of the areas. In many of the areas workers were fairly evenly distributed among establishments having one or the other type of plan. Notable exceptions were Allentown-Bethlehem-Easton, Detroit, Phoenix, Pittsburgh, San Francisco, and Seattle, in all of which areas three-fifths or more of the plant workers were in establishments with single rate plans. Milwaukee, Oklahoma City, and Rochester were the only areas in which as many as three-fifths of the plant employees were in establishments providing formal rate ranges.

3/ See appendix for definitions of plant worker and office worker employment.

Among the broad industry groups studied, the largest proportion of plant workers employed in establishments with formal wage plans was in manufacturing and public utilities. Substantial numbers of workers in other industry groups, on the other hand, were employed in establishments that determined wage rates on an individual basis.

Formalized wage structures for office workers were somewhat less prevalent than those for plant workers and were mostly confined to plans providing rate ranges for individual occupations. In most of the areas, between a half and three-fourths of the total office employment was in establishments having formal wage plans for office workers. These plans were least common in the southern areas where frequently more than half the workers were in establishments determining salaries of office workers on an individual basis.

Incentive methods of wage payment were limited almost entirely to plant workers and for the most part to those in manufacturing industries. Among the areas studied, the proportion of manufacturing plant workers that was classified as incentive workers ranged from less than a tenth in Houston, Oklahoma City, Salt Lake City, Phoenix, and Seattle to slightly more than half in Allentown, Scranton, and Norfolk. A third or more of the manufacturing plant workers in all of the larger industrial areas with the exception of Detroit and Los Angeles (10 and 15 percent, respectively) received pay based on incentive plans.

Occupational Earnings

Although interarea relationships in pay levels varied somewhat by occupation and industry division, plant and office workers in the San Francisco-Oakland area and Detroit were the highest paid and held a wage advantage amounting to 25 percent or more in many cases over workers in comparable jobs in some of the other areas studied. To illustrate, area average hourly earnings for stock handlers ranged, on a regional basis, as follows: New England—from \$1.25 in Hartford and Providence to \$1.37 in Boston; Middle Atlantic—from \$1.29 in Scranton to \$1.49 in Pittsburgh; South—from 86 cents in Jacksonville to \$1.12 in Oklahoma City; Middle West—from \$1.23 in Louisville to \$1.64 in Detroit; and Far West—from \$1.27 in Phoenix to \$1.66 in San Francisco-Oakland. Average weekly salaries for women performing general stenographic work ranged in: New England—from \$43 in Providence to \$48 in Hartford; Middle Atlantic—from \$41 in Scranton to \$52 in New York City; South—from \$45 in Oklahoma City to \$51.50 in Houston; Middle West—from \$45.50 in Minneapolis-St. Paul to \$57.50 in Detroit; and, Far West—from \$45.50 in Salt Lake City to \$57 in San Francisco-Oakland.

Differences between the lowest and highest area averages for office jobs were noticeably smaller than for plant jobs. Stenographers in Detroit, for example, averaged 40 percent more than in Scranton; whereas, stock handlers in the San Francisco Bay area were paid 93 percent more than in Jacksonville. The interarea wage spread for the skilled maintenance trade jobs studied was much narrower than for stock handlers and other work categories related to custodial, warehousing, and shipping functions.

Average earnings for comparable occupations were usually higher in manufacturing than in nonmanufacturing. The average for general stenographers in manufacturing exceeded the all-nonmanufacturing average in 37 of the 40 areas, with individual city wage differences ranging from 50 cents to \$8.50 a week. Averages for secretaries employed in manufacturing exceeded the nonmanufacturing average in all but six of the areas, with differences ranging from 50 cents to \$9.50 a week. A less consistent relationship was found among plant jobs. Janitors in manufacturing establishments averaged more in each area than those in nonmanufacturing industries; averages for maintenance electricians, on the other hand, were higher in nonmanufacturing in about half the areas for which comparisons were possible.

Wages and salaries of workers in the transportation, communication, and other public utilities group were usually higher than those in any of the other broad nonmanufacturing industry groups within the scope of the survey. Occupational averages in this industry group were, in fact, frequently equal to or higher than those in manufacturing. General stenographers employed by public utilities averaged more than those in manufacturing in about half the cities.

Earnings of individual workers in the jobs studied were widely dispersed within each industry division and area. ^{4/} Highest earnings generally exceeded lowest earnings by amounts that exceeded the differences between the highest and lowest areas averages for the same jobs. This dispersion of individual earnings can be attributed to variation in earnings within individual establishments, and differences in pay levels among establishments within the same industry and among industries.

Related Benefits

Paid holidays were granted to virtually all office workers and to the vast majority of the plant workers in all but a few of the communities surveyed. Six days were most commonly provided to both plant and office workers. Workers in the

^{4/} Distributions of workers by earnings classes are presented in the report issued separately for each area.

four New England areas, New York City and adjacent Newark-Jersey City, and the areas of the Far West generally received the most liberal holiday benefits, with large numbers of office and plant workers receiving 7 or more days. A substantial proportion of workers in four southern areas (Atlanta, Birmingham, Jacksonville, and Memphis) was employed in establishments providing fewer than six paid holidays.

Holiday provisions in each area tended to be somewhat more liberal for office workers than for plant employees. The comparatively small proportion of plant workers employed in establishments with holiday provisions in Birmingham and Pittsburgh reflects the fact that at the time of the survey the steel industry did not provide paid holidays; recently, however, these benefits were negotiated and workers currently receive 6 days annually.

Among the broad industry divisions included within the scope of the surveys, holiday provisions were most liberal in the finance, insurance, and real estate division. A majority of the workers employed in these industries received 7 or more days a year with pay in three-fourths of the areas studied and in 15 of the areas workers commonly received 11 or more days annually.

Paid vacations were provided to nearly all plant and office workers, subject to minimum service requirements. Office workers typically received longer vacations than plant employees, the former usually being granted a 2-weeks' vacation with pay after a year of service, whereas plant workers customarily received a week's vacation after a corresponding length of service. Formal provisions for 3-weeks' paid vacation after 15 years' service applied to a substantial proportion of both plant and office workers. Provisions for paid vacations in excess of 3 weeks were negligible, with the exception of those reported by retail trade establishments in a few cities.

Formal provisions for paid sick leave were in effect more frequently for office workers than plant employees, although in neither instance was a majority of the workers employed in establishments providing such benefits. The proportion of office workers in establishments with sick leave provisions most frequently ranged from a fourth to less than half. Formal sick leave provisions for plant workers were generally more common in public utilities and trade industries and least prevalent in manufacturing.

Christmas or year-end bonus payments were provided by establishments employing between a fourth and a half of the total workers in nearly all areas. Among the industry groups studied, these provisions were usually least prevalent in public utilities and generally most common in the trade and finance industries. In most areas, the benefits were provided to a larger proportion of office workers than plant workers. Profit-sharing plans--either for plant or office workers--were reported in each area; the proportion of workers employed in establishments with such plans exceeded 10 percent in only a few areas.

Insurance plans, paid at least in part by the employer, were available to a large majority of the plant and office workers in each area. Frequently, workers were employed in establishments that paid at least a portion of the premium for two or more types of insurance. Although life insurance plans were most prevalent, health and hospitalization plans were also common in nearly all areas. A slightly larger proportion of office workers than plant workers were eligible for insurance benefits.

Retirement pension plans were available to a majority of the office workers in three-fourths of the areas and were available to most plant workers in a fourth of the areas. Typically, provisions for retirement pensions were most common in the public utilities group of industries and least prevalent among the services industries.

1/ Includes data for vacation provisions in addition to those shown separately, if any.

2/ Less than .05 of 1 percent.

3/ Excludes data for department and limited-price variety stores.

4/ Excludes data for limited-price variety stores.

5/ Although data could not be shown separately for retail trade due to the omission of a number of department and limited-price variety stores, the remainder of retail trade is appropriately represented in the data for "all industries."

6/ Excludes data for hotels.

7/ Excludes data for department stores.

8/ Excludes data for motion picture production; these data are included, however, in "all industries."

** Finance, insurance, and real estate.

Table B-3: *Paid Vacations (Plant Workers)*

1/ Includes data for industries in addition to those shown separately.

2/ Excludes data for department and limited-price variety stores.

3/ Excludes data for limited-price variety stores.

4/ Although data could not be shown separately for retail trade due to the omission of a number of department and limited-price variety stores, the remainder of retail trade is appropriately represented in the data for "all industries."

5/ Excludes data for hotels.

6/ Excludes data for department stores.

7/ Excludes data for motion picture production; these data are included, however, in "all industries."

* Transportation (except railroads), communication, and other public utilities.

** Finance, insurance, and real estate.

The earnings data and supplementary wage practices information presented in this bulletin have been summarized from individual reports on community wage surveys conducted in 40 major labor markets between September 1951 and May 1952 (see table for payroll period studied in each area). Data were obtained by visits of Bureau field representatives to establishments in the areas surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in each area in compiling earnings data for the following types of occupations: (a) office clerical; (b) professional and technical; (c) maintenance and power plant; and (d) custodial, warehousing, and shipping. The covered industry groups are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Although earnings information contained in bulletin reports on individual area studies includes both averages and distributions of workers by earnings classes, data presented herein have been limited to occupational averages. Information on supplementary wage benefits has also been summarized in greater detail in reports issued for each area.

As indicated in the appendix table, only establishments above a specified size were studied; smaller establishments were omitted because they furnished insufficient employment in the occupations studied to warrant their inclusion. A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings are

included. Where weekly earnings are reported (rounded to the nearest 50 cents), as for office occupations, they refer to standard salaries that are paid for standard work schedules. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

The term "office workers" referred to in this bulletin is defined to include all office clerical employees and excludes administrative, executive, professional, and technical personnel. "Plant workers" is defined to include working foremen and all nonsupervisory workers (including leadmen and trainees) engaged in nonoffice functions. Administrative, executive, professional and technical employees, and force account construction employees who are utilized as a separate work force are excluded. Although cafeteria workers, routemen, and installation and repair employees are excluded in manufacturing industries, these work categories are included as plant workers in nonmanufacturing industries. Data for plant workers were not collected for the banking and insurance industries.

Information on related wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under a separate tabulation.
